Asset Essentials Reviews and Pricing - 2020
In financial economics, asset pricing refers to a formal treatment and development of two main pricing principles, outlined below, together with the resultant models. There have been many models developed for different situations, but correspondingly, these stem from general equilibrium asset pricing or rational asset pricing, the latter corresponding to risk neutral pricing. Investment theory, which is near synonymous, encompasses the body of knowledge used to support the decision-making proces

A= 300($10)=$5;000 = 60% and x. B= 50($40)=$5;000 = 40%. Expected return = 0.60(8%) + 0.40(13%) = 10%. New portfolio value = 300($12) + 50($36) = $5,400. Return is ($5,400 - $5,000)/$5,000 = 8% or, equivalently, 0.60[($12 - $10)/$10] + 0.40[($36 - $40)/$40] = 0.60(20%) + 0.40(-10%) = 8%. New portfolio weights are x.

Capital Asset Pricing Model Homework Problems
History generally accords the development of the single-period, discrete-time Capital Asset Pricing Model (CAPM) to the works of Sharpe (1964), Lintner (1965a,b) and Mossin (1966).
