available for download in dozens of different formats.

## **Biology Ecological Succession Lab Answer**

Primary ecological succession is the changing sequence of communities starting with the first biological occupation of a place where there were no living organisms previously. For example, the colonization and the following succession of communities on a bare rock is a case of primary ecological succession.

## **Ecological Succession - Biology Q&As**

According to Kerbs (1994), succession is the universal process of directional change in vegetation and can be recognized by the progressive change in the species composition of the community. In his words, the development of the community by the action of vegetation on the environment leading to the development of new

After watching the videos, work with your group to identify examples and explanations of the terms provided in the videos. Term Group Video Example Video Explanation Example(s) Location Natural

### **Shifting Baselines and Succession Answer Key**

Ecological succession is a term developed by botanists to describe the change in structure of a community of different species, or ecosystem. The concept of ecological succession arose from a desire to understand how large and complex ecosystems like forests can exist in places known to be recently formed, such as volcanic islands.

### **Ecological Succession - Definition, Examples and Types**

This Ecological Succession lab will have students observing the changes in an abandoned hay field over a 100-year time period by counting tree symbols and calculating the percentages of tree
