Beginning in 1958, Korolev began undertaking design studies for what would become the Soviet Vostok spacecraft: a fully automated capsule capable of holding a human passenger in a space suit. By...

This Is Why The Soviet Union Lost 'The Space Race' To The USA

The Soviet space program was the national space program of the Union of Soviet Socialist Republics, active from the 1950s until the state's collapse in 1991. The Soviet space program was mainly based on the human spaceflight program and the development of the expendable launch vehicles, which had been split between many design bureaux competing against each other. Over its 60 years of history, the Soviet space program was responsible for a number of major firsts in human spaceflight, including t

Soviet space program - Wikipedia

'Union') is a series of spacecraft designed for the Soviet space program by the Korolev Design Bureau (now RKK Energia) in the 1960s that remains in service today, having made more than 140 flights. The Soyuz succeeded the Voskhod spacecraft and was originally built as part of the Soviet crewed lunar programs.

Soyuz (spacecraft) - Wikipedia

Although US and Soviet designs for rockets for space launch applications started from essentially the same point (the German Aggregate rockets) they diverged fairly radically in basic design principles, based upon the available manufacturing and materials technology, concept of operations through launch flow, prior experience and data, and in no small part the prejudices and preconceptions of the dominant personalities for each development.

What were important differences between Soviet and ...
