Dental implants are surgically placed in your jawbone, where they serve as the roots of missing teeth. Because the titanium in the implants fuses with your jawbone, the implants won't slip, make noise or cause bone damage the way fixed bridgework or dentures might.

Dental implant surgery - Mayo Clinic

A dental implant is a surgical fixture that is placed into the jawbone and allowed to fuse with the bone over the span of a few months. The dental implant acts as a replacement for the root of a missing tooth. In turn, this "artificial tooth root" serves to hold a replacement tooth or bridge.

Dental Implants Procedure, Cost, Types, Problems & Safe

A Randomized controlled Clinical trial which aim is to investigate the clinical outcome of dental implants in titanium-zirconium alloy compared to traditional titan-4 implants. The hypothesis is set to no difference in the clinical outcome for the two types of implants.

Implants in Clinical Dentistry 2nd Edition By Richard M.Palmer

Getting a dental implant isn't cheap. If you get dental implants, you can expect to spend \$3,000 to \$5,000 per tooth. Patients have to spend so much money because implants require dental surgery, and implants are designed to match their specific teeth. Luckily, there are some programs and nonprofits that can help you get free dental implants.

Free Dental Implants | DentalSave Dental Plans

Replacement of a failed dental implant with a second implant has varying survival rates in the literature, and have been reported to be in the range of 69% to 91%. (4,5) In addition to having lower success rates than the initial implants, replacement implants often require additional soft- and/or hard-tissue grafts, longer time to heal, new abutments/crowns, and possible
