Introduction To Algorithms Cormen Solutions

Welcome to my page of solutions to "Introduction to Algorithms" by Cormen, Leiserson, Rivest, and Stein. It was typeset using the LaTeX language, with most diagrams done using Tikz. It is nearly complete (and over 500 pages total!!), there were a few problems that proved some combination of more difficult and less interesting on the initial pass, so they are not yet completed.

Chapter 1 (The Role of Algorithms in Computing) 1.1 (Algorithms) Exercise 1.1-1 (sorting, optimally multiply matrices, and convex hulls) Sorting is done in all sorts of computational problems. It is especially helpful with regard to keeping data in a understood ordering so that other algorithms can then work easily

Initialize all the values to a singly linked free list (flag set to false) with a head and tail pointer. On insert, use the memory pointed to by the head pointer and set the flag to true for the new element and increment the head pointer by one. On delete, set the flag to false and insert the newly freed memory at the tail of the linked list.

I am currently reading Cormen's famous Introduction to Algorithms book. However, I do not have a resource where I can verify my solutions to the exercises. I've tried to find something on Google, but everything I find is for the 2nd edition whereas I have the 3rd. Some problems are similar, but some aren't. I'd like to have a solutions manual for this specific book.
